

SOP-LOG-02: Failed Delivery & Customer Unavailability Standard Operating Procedure

SOP-LOG-02: Failed Delivery & Customer Unavailability Policy

1. Purpose and Scope

This standard operating procedure defines mandatory operational steps when a delivery recipient is unavailable or unreachable at the destination.

2. On-Site Protocol for Unavailable Customer

When a driver arrives at the customer delivery destination and the customer or authorized receiver is unavailable:

1. Mandatory Waiting Window: The driver must wait at the loading dock or premises for a minimum of 15 minutes before initiating an exception.
2. Direct Contact Attempt: The driver must attempt telephone contact with the customer contact person at least twice, spaced 5 minutes apart.
3. Dispatch Escalation: If the customer remains unreachable after 15 minutes, the driver must notify Central Dispatch via the LogiAgent mobile application.
4. Photographic & GPS Verification: The driver must record photographic proof of the delivery location and obtain a timestamped GPS location.

3. Delivery Exception Notice (DEN-02)

- Central Dispatch immediately transmits an electronic Delivery Exception Notice (DEN-02) to the customer via SMS and email.
- The customer is provided a 30-minute grace window to respond with alternative receiver authorization or rescheduled instructions.

SOP-LOG-02: Failed Delivery & Customer Unavailability Standard Operating Procedure

4. Re-Delivery and Return Procedures

Re-Delivery Attempts

- Maximum Allowed Attempts: The carrier will make up to three (3) delivery attempts within five (5) business days.
- Re-delivery Fee: A standard re-delivery surcharge of \$65.00 applies to each subsequent attempt after the initial failure.

Cold Chain & Perishable Exceptions

- Perishable or refrigerated cargo (2°C to 8°C) cannot remain in an unconfirmed transit state exceeding 2 hours.
- If receiver is unavailable, dispatch must reroute perishable shipments to the nearest temperature-controlled regional hub immediately.

Return to Terminal (RTT) Protocol

- If all 3 delivery attempts fail or if the customer formally refuses delivery, the driver must return non-delivered freight to the origin distributor.
- The driver and receiving warehouse supervisor must execute a signed Return Exception Manifest.
- Storage and Demurrage: Storage fees of \$45.00 per pallet/day begin accruing automatically after 48 hours of holding at the regional hub.
